SUMMARY

Software Developer with production experience across manufacturing ERP and large-scale membership platforms. Strong frontend foundation in React, Next.js and TypeScript, combined with hands-on backend work in NestJS and Firebase — API design, database modelling and deployment. Delivers end-to-end features under tight timelines and keeps production systems stable.

TECHNICAL SKILLS

Languages TypeScript, JavaScript, C#, Dart, Python
Frontend React, Next.js (SSR & CSR), Astro, TanStack Start, Tailwind CSS, Mantine, Ant Design
Backend NestJS, Elysia, Firebase (Cloud Functions), Mailgun
Database PostgreSQL, MySQL, NocoDB
Tools Git, GitHub, GitLab, Fork, Figma, Postman, Linear, TablePlus, GitHub Copilot, Claude Code

WORK EXPERIENCE

Software Engineer — IDOSOFT January 2025 – Present

Enterprise Resource Planning (ERP) — TNR Factory · Next.js (CSR) · NestJS · PostgreSQL · TypeScript

- Built the system fullstack — frontend, backend, mobile and desktop paths, and the deployment process.
- Reviewed incoming designs and compiled question lists for the PM and factory team, surfacing concerns and edge cases before development started.
- Designed the database diagram with the team for the Packing, Warehouse and QA modules.
- Maintained phase-2 modules including Foil, Lubricant and Plan Order.
- Wrote utility scripts used as an emergency fallback to bring factory services up when the normal start-up script failed.
- Optimised operational and reporting workflows for stakeholder visibility, meeting 1-week delivery cycles.

CP Member Brandsite · Next.js (SSR) · PostgreSQL · Firebase · Mailgun · TypeScript

- Built responsive, design-system-aligned UI for a membership platform serving 500–1,000 active users, integrating backend APIs across the main user workflows.
- Designed and implemented the event-driven transactional email system on Firebase Cloud Functions + Mailgun: burning point, earning point, email verification, forgot password, welcome message, and product-review transactions (admin approval required before publishing).
- Worked across frontend and backend with a frontend focus.

Lose Weight Internal Campaign Event Website · Next.js (SSR) · Directus · TypeScript

- Delivered core frontend modules — User Profile, Terms and Weight Record — within a 2-week sprint.
- Adapted components to evolving campaign requirements while keeping the codebase maintainable and fully responsive.

PROJECTS

UX/UI Portfolio Website · Astro · Tailwind CSS · TypeScript

- Turned client-provided designs into a pixel-perfect, fully responsive site with sub-second loads via static site generation, adding animation work on top of the design.
- Iterated on components directly with the client to match their creative and functional intent. tripop-portfolio.netlify.app · [source](#)

Personal Portfolio · React · React Router · Vite · Tailwind CSS · TypeScript

- Multi-page portfolio with per-project case-study pages, built on React Router with a typed data layer.

Wongnai UI Clone · React · CSS

- Recreated Wongnai's frontend architecture and interaction patterns to study production layout systems and UX. [demo](#) · [source](#)

EDUCATION

BSc Media Technology — KMUTT
GPAX 3.64 — first-class honours

2021 – 2024
