SUMMARY

Software Developer with experience building and deploying production systems, including ERP solutions for manufacturing operations and large-scale membership platforms. Strong frontend expertise in React, Next.js, and TypeScript, combined with hands-on experience integrating backend services, designing APIs, and managing data flow in production environments. Focused on building scalable, high-performance, and reliable systems, with a proven ability to deliver end-to-end features, collaborate cross-functionally, and contribute to production-ready applications in fast-paced environments.

TECHNICAL SKILLS

PROGRAMMING LANGUAGES: C#, TYPESCRIPT, JAVASCRIPT, DART, PYTHON

FRONTEND: REACT, TAILWIND CSS, NEXT.JS, TANSTACK START, MANTINE, ANT DESIGN, ASTRO

BACKEND: NEST.JS, FIREBASE, ELYSIA

DATABASE: MYSQL, POSTGRESQL, NOCODB

TOOLS: GIT, GITHUB, GITLAB, GITHUB COPILOT, FORK, FIGMA, POSTMAN, LINEAR, TABLE PLUS, CLAUDE CODE

EDUCATION

KING MONGKUT'S UNIVERSITY OF TECHNOLOGY THONBURI

2021-2024

Bachelor of Science (Media Technology) GPAX: 3.64 (first-class honours)

WORK EXPERIENCE

SOFTWARE ENGINEER — IDOSOFT

January 2025 - Present

- **Enterprise Resource Planning (ERP) for TNR Factory**
 - **Contributed** to the development of a production ERP system, building scalable and maintainable frontend architecture using React, Next.js, and TypeScript, while integrating and developing backend services with NestJS.
 - **Optimized** operational workflows and reporting modules, improving data visibility for stakeholders while meeting strict 1-week delivery timelines.
 - **Managed** end-to-end deployment, collaborating closely with other software engineers and the project manager to ensure continuous production stability.
- **Member CP Brandsite Website**
 - **Developed and implemented** scalable, responsive UI components for a membership platform serving 500-1,000 active users, ensuring strict alignment with design systems.
 - **Streamlined** user experience across multiple workflows by successfully integrating backend APIs and ensuring production-ready frontend performance.
 - **Designed and built** an automated, event-driven transactional email system using **Firebase Cloud Functions** to enhance user engagement workflows.
- **Lost Weight Internal Campaign Event Website**
 - **Delivered** core frontend modules—including User Profile, Terms, and Weight Record—within a high-pressure 2-week sprint.
 - **Adapted** UI components to meet evolving campaign requirements while maintaining high code maintainability and responsiveness.

PROJECT

UXUI PORTFOLIO WEBSITE

- Transformed client-provided designs into a high-performance, pixel-perfect portfolio website using Astro and Tailwind CSS, achieving sub-second page load times through Static Site Generation (SSG) and a fully responsive layout.
- Collaborated closely with the client to iterate on UI components, ensuring the final product aligned perfectly with their creative vision and functional requirements.
